PRODUCT GUIDANCE SHEET

BRAKES CONCENTRATED SINK DETERGENT

A powerful super concentrated neutral detergent. Primarily used as a manual washing up liquid in commercial kitchens where the high volume used requires ultimate control. It can also be used at extremely high dilutions for general hard surface and floor cleaning. To aid product recognition the Brakes Concentrated Sink Detergent product label, the solutions, both concentrated and diluted, and the label on the dispenser and trigger bottle are green in colour.

Product Name: BRAKES CONCENTRATED SINK DETERGENT
Description: Super concentrated odourless neutral detergent
Pack Size(s): 4x2ltr
Pallet Size(s): 64
Product Code(s): A24013

HOW TO USE

Used for washing up pans, utensils and other catering equipment that will not fit into the dishwasher. Designed to remove starches, grease and stubborn residues from larger catering utensils. Remember, highly soiled items should be pre-soaked in a hot water and chemical solution before normal washing up commences.

Caution:

This product is designed to degrease plates and utensils, so it will also remove the some of the natural oils that are present in your skin. Please ensure you wear rubber gloves to reduce the risk of skin irritation.

Brakes Concentrated Sink Detergent must be diluted before use, using a Brakes over-sink or bottle-fill dispenser. To prepare a sink cleaning solution, use the dispenser to add two to four plunges of green Brakes Concentrated Sink Detergent into a sink of hot water depending on the degree of soiling.

For a bottle spray-cleaning solution, add one plunge of the dispenser into a green labelled Brakes Concentrated Sink Detergent spray bottle and fill with water.

Over Sink Fill Instruction:

1. Pull GREEN lever in an upward direction until it CLICKS to prime the unit.
2. Pull lever towards you in an upward direction until it CLICKS. This is now ready to vend.
3. To vend product PUSH lever downwards. The concentrate will be dispensed into the sink at the correct dilution to water.
4. Wait for the green indicator to reappear in the window before vending again. It is suggested that 2-3 plunges is sufficient product in sink of warm wash water.

Cross-Contamination Prevention

Users should note that where there is a risk of cross-contamination and an automatic dish or glass washing machine cannot be used to provide thermal disinfection, a two-stage cleaning and disinfection washing up process is best practice.

Stage 1 Cleaning:

Remove food debris then manually wash dishes or equipment and allow sufficient time for the product to penetrate the soiling, agitating heavily soiled areas if necessary. Rinse with fresh clean water or wipe down with a clean damp cloth.

Stage 2 Sanitising:

In a separate sink prepare a disinfectant solution which meets BS EN 1276 standard. Immerse washed items in the disinfection solution and allow sufficient contact time before rinsing with fresh clean water or wiping with a clean damp cloth. Allow to air-dry or dry the surfaces with a separate clean dry cloth.

The safety information below refers to the concentrated product as supplied. When the product is diluted as recommended, the solution is not classified as hazardous, but normal hygiene precautions are advised.

SAFETY ADVICE

Wear protective gloves. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. If eye irritation persists get medical attention. **For further detailed information on this product please refer to the Safety Data Sheet. FOR PROFESSIONAL USE ONLY**

COSHH STATEMENT

COSHH is a law that requires all employers to take steps to control substances (chemicals) that may cause harm to employees, contractors and visitors to the workplace. Every work environment will be different in terms of the hazardous chemicals that are present, and how these are used, and individual assessments may be necessary to consider how chemicals can be handled and stored safely, in addition to ensuring that appropriate PPE and training is provided for employees. Product MSDS and Product Guidance Sheets are intended to help when carrying out a COSHH assessment, however if further advice is needed with regard to specific issues in your work environment we are happy to provide advice. **E-Mail Technical:** technical.solutions@rpadam.co.uk
